

Take your homework 7 assignment and add regular expression form validation and event handling to provide cues.

Constraints are:

The name should be at least two characters (letters only).

The phone should be in a format 111-222-3333 or (111)222-3333

The email should be aaaa@bb.ccc where the ccc portion could be one or two characters.

The state should be two upper case characters.

The Zip can be Zip or Zip+4 (i.e. 02478 or 02478-3422)

Use the event onfocus to print format hint. You can also check format on onblur if you like.

Here are some screen shots of my page with validation.
